

## Accessibility Conformance Report

IRS Publication 15-T (2026) — Worksheet Pages 9–10 (excerpt)

Report date: June 11, 2026. Demonstration sample — remediation of a publicly available government document, prepared to demonstrate methods and verification practices. This document and the remediated deliverable were produced by an AI-assisted pipeline with machine validation; this report is itself a tagged, PDF/UA-conformant document.

### Source document profile

Excerpt demonstration on the publication's densest content: a multi-step withholding worksheet with fill-in lines and an embedded rate table.

### Remediation method

Worksheet fill-in lines rendered as labeled list items grouped under step headings; the pay-period table rebuilt as an accessible table with header row and caption; heading hierarchy normalized for a standalone excerpt.

### Standards and validation

Target standards: PDF/UA-1 (ISO 14289-1) structural conformance, supporting WCAG 2.1 Level AA document requirements under the DOJ ADA Title II web and document accessibility rule.

Machine validation: 17,765 of 17,765 machine checks passed (veraPDF 1.30, PDF/UA-1 profile), 0 failures.

Verification model: three independent nets — (1) machine conformance (veraPDF, full PDF/UA-1 profile); (2) mechanical content-coverage gating against the source extraction; (3) semantic review of heading hierarchy, reading order, list and table structure. Final assistive-technology review (screen reader) is performed before client delivery.

### Scope and limitations

Excerpt of 2 pages for demonstration; an interactive fill-in version would be delivered as a tagged form in production.
